Personal Description

A graduate of Applied Bachelor's Degree in Informatics Engineering (D4) with a passion for developing Web Back-End systems, and IoT solutions. Experienced as an intern developer in a multinational company. Currently seeking new opportunities to further enhance skills and contribute to professional growth.

Internship Experiences

PT. PAL INDONESIA – Surabaya, East Java, Indonesia

Mar 2021 – Apr 2021

Intern Programmer

PT PAL Indonesia is the largest shipyard company in Indonesia, specializing in:

Design and construction of warships and commercial vessels. Construction and Maintenance, Repair, and Overhaul (MRO) of submarines. MRO services for warships, commercial vessels, and maritime products. General engineering in energy and electrification products. Technology development.

Key Contributions:

- Developed a back-end system for broadcasting notifications via WhatsApp, Telegram, and Email.
- Developed a WhatsApp API for the broadcasting notification system.

CV Alva Indo Pratama – Malang, East Java, Indonesia

Jan 2020 – Mar 2020

Intern Android Development

A company engaged in Digital Television Broadcast (IPTV, DVB-C/T2/S2) and development of information systems for Desktop, Web, and Android platforms. Also involved in designing and building Fiber Optic networks (MAN, WAN, FTTx, Hybrid).

Key Contributions:

- Developed Android IPTV EyePlus Application.
- Built the Web Back-End server for API integration with the Android IPTV EyePlus client.

Education Level

State Polytechnic Of Malang – Malang, East Java, Indonesia

Sep 2017 – Aug 2024

Bachelor Of Applied Science (D4) In Informatics Engineering

GPA: 3.60 / 4.00

Skill, Achievements & Other Experience

- **Soft Skills:** Adaptability, Analytical thinking, Self-starter, Teamwork, Problem-solving
- **Programming Languages:** Kotlin, Python, Java, C++, SQL, JavaScript, PHP
- **Software & Frameworks:** Arduino, JavaScript (ES6), Android Studio, MySQL, NoSQL (MongoDB, Firebase), Microsoft Office, Git, VMware, Remote Desktop (RDP & VNC),
- **Operating Systems:** Windows, Linux (Debian, Ubuntu Server, Fedora)
- **Languages:** English & Indonesian

Project Experience

- **SmartFishFeeder**

An automated, web-controlled fish feeder powered by a Wemos D1 Mini (ESP8266), an RTC module (DS3231 or DS1307), and a servo motor. Deployment:

- Deploy on Home Personal Aquarium,
- Aquarium Shop.

- **Smart Attendance using ESP32 with Facial Recognition and RFID**

SmartAttend is a sophisticated, Deploy-ready attendance management platform designed for modern organizations. It combines a robust Laravel 12 backend with a dynamic React 19 (Inertia.js V2) frontend, Dockerized deployment, and an integrated Python Face Recognition Service to streamline operations. Designed for seamless integration with ESP32-CAM devices for contactless, facial recognition-based attendance. Deployment:

- Vocation High School 2 Kraksaan,
- Elementary School 1 Gondosuli,
- Junior High School 1 Pakuniran.

- **Digital Wedding invitation with Google Script and Sheet Integration**

This project leverages modern frontend technologies combined with a lightweight, serverless backend approach:

- Frontend: React + TypeScript built with Vite.
- Styling: Tailwind CSS for responsive and highly customizable UI.
- Backend/Database: Google Apps Script serving as a REST API to read/write data to a Google Sheet.
